1. What is DrapeStudio?

DrapeStudio is an AI-powered garment model image generator designed for clothing sellers. You upload photos of your garment, configure a virtual model and scene, and receive photorealistic catalogue-quality images — no photoshoot required.

Images are generated using Google's Gemini AI image generation model. Each generation produces **3 images** (adult/children modules) or **2 images** (accessories module), each from a different camera angle.

Key Features

- **4 Modules:** Adult Fashion, Children's Fashion, Accessories, Virtual Fit-On
- **Customisable Models:** Gender, age, ethnicity, body type, hair, skin tone
- **Scene Control:** Environment, pose, framing, and lighting
- **Multi-language:** English, Sinhala, Hindi, Tamil
- **History & Reuse:** Past generations and uploaded images are saved
- **Download:** Individual images or download all as a ZIP file

2. Getting Started & Login

Accessing the App

Open **https://drapestudio.demostudio.cc** in any modern browser (Chrome, Edge, Safari, or Firefox).

Login Methods

Method	How
Google OAuth (recommended)	Click "Sign in with Google" and use your Google account
Dev Login (testing only)	Visit `/auth/dev-login` to auto-create a test account (local dev only)

First-Time Users

After your first login, you will be redirected to the **Profile** page with a welcome banner. You receive **3 free credits** to start. You can set your display name and preferred language.

> **Tip:** The Google OAuth redirect URI must match the configured value exactly. For production this is `https://drapestudio.demostudio.cc/auth/callback`.

3. The Generation Flow (5 Steps)

The adult and fit-on modules follow a **5-step process**. Children and accessories use a streamlined **4-step** variant.

1. Upload › 2. Configure › 3. Review › 4. Generate › 5. Results

Each step has a visual progress indicator at the top of the page. You can navigate back to previous steps using the "Back" button. All selections are preserved when going back and forward.

4. Module: Adult Fashion

Step 1 — Upload Garment Photos

1. **Select a garment type** from the category cards: Casual, Formal, Saree, Shalwar Kameez, Batik, or Sarong.
2. **Choose the model gender:** Feminine, Masculine, or Unisex.
3. **Upload 1–5 garment photos** by dragging and dropping, clicking the upload area, or using the camera (mobile). Accepted formats: JPG, PNG, WEBP. Minimum 400×400 px.
4. **(Optional) Load from Previous Uploads** — expand the history section to reuse previously uploaded garment images without re-uploading.

> **Info:** Images larger than 5 MB are automatically compressed. You can remove individual photos by clicking the × button on each thumbnail.

Step 2 — Configure Model & Scene

This page has three collapsible panels:

Panel 1: Model Appearance Required

Setting	Options
Gender	Set in upload step (displayed read-only)
Age Range	18–24, 25–34, 35–44, 45–54, 55+
Ethnicity	Sri Lankan, South Indian, Mid Eastern, African, European
Skin Tone	Very Light, Light, Medium, Dark, Very Dark (colour swatches)
Body Type	Slim, Average, Athletic, Plus
Hair Style	Gender-dependent options (e.g. Long Straight, Short Bob, Braided, etc.)
Hair Color	Black, Dark Brown, Brown, Auburn, Blonde, Gray, White
Additional Description	Free text (max 300 chars) e.g. "wearing glasses"

Panel 2: Scene Settings Required

Setting	Options
Environment	White Studio, Urban Street, Beach, Garden, Office, Coffee Shop, Traditional Room
Pose	Fashion Stand, Casual Walk, Seated, Dynamic

Framing	Full Body, Half Body, Close-Up

Panel 3: Advanced Options Optional

Setting	Details
Measurements	Height, Chest/Bust, Waist, Hips (all in cm). Helps the AI match garment fit.
Lighting	Auto, Soft Natural, Studio Flash, Golden Hour

A **Quick Preview** card at the bottom summarises your choices (e.g. "Female · 25–34 · Sri Lankan | Garden · Standing · full body").

> **Tip:** Smart defaults are applied based on garment type. For example, selecting "Saree" automatically defaults to Traditional Room + Standing pose.

Step 3 — Review

Review all your settings before generating:

- Garment photos (scrollable thumbnails)
- Model appearance summary
- Scene settings summary
- Measurements (if provided)
- Credit cost estimate and remaining credits

Click **"Generate Images"** to start.

Step 4 — Generating

A polling screen shows real-time status updates:

- Queued — Waiting for a worker
- Running — AI is generating your images
- Succeeded — Redirects to Results
- Failed — Shows error message (credits not deducted)

Generation typically takes **30–90 seconds** depending on complexity.

> **Note:** Do not close the browser tab during generation. The page polls the server every 1–2 seconds for status updates.

Step 5 — Results

View your generated images:

- **3 images** from different camera angles: Front view, Three-quarter view, Back view
- Navigate between images using arrow buttons or swipe (mobile)
- Generation cost displayed (e.g. "$0.003")
- **Download:** Individual image or "Download All as ZIP"

- **Try Again:** Re-generate with the same settings
- **New Upload:** Start a completely new generation

5. Module: Children's Fashion

Access via the **"Kids"** card on the home page, or navigate to `/children`.

Age Group Selection

Group	Age	Allowed Poses	Backgrounds
Baby	0–2 yrs	Sitting, lying, held	Nursery, soft blanket, pastel studio
Toddler	2–5 yrs	Standing, walking, playing, sitting	Playground, garden, colourful studio
Kid	6–12 yrs	Standing, casual, school, active	Park, studio, bedroom, school
Teen	13–17 yrs	Fashion standing, casual, urban, seated	Urban, studio, campus, outdoor, beach

Configuration

Similar to the adult module, but with age-group-specific options for poses, backgrounds, hair styles, and expressions (happy, curious, laughing, etc.).

The children's module uses **softer camera angle descriptions** and **3 output images** per generation.

> **Safety:** A built-in safety validator rejects invalid parameter combinations to ensure appropriate imagery for minors.

6. Module: Accessories

Access via the **"Accessories"** card on the home page, or navigate to `/accessories`.

Accessory Categories

Necklaces / Chains	Earrings	Bracelets / Bangles
Rings	Handbags / Purses	Hats / Headwear
Scarves / Shawls	Crochet Items	Hair Accessories

Display Modes

Mode	Description	Aspect Ratio
On Model	Accessory worn on a virtual model	1:1 square
Flat Lay	Product on a styled surface (marble, wood, velvet, etc.)	1:1 square
Lifestyle	Product in a real-world scene context	1:1 square

Accessories generate **2 images** per generation (vs. 3 for adult/children).

7. Module: Virtual Fit-On

Access via the **"Virtual Fit-On"** card on the home page, or navigate to `/fiton`.

How It Works

1. **Upload Garment:** Upload garment photos, select garment type, optionally provide garment measurements (size label, chest, waist, hips, length).
2. **Customer Details:** Upload a customer photo (required), enter customer measurements (height, chest, waist, hips, shoulder width), and select fit preference (Regular, Tight, Loose, Oversized).
3. **Results:** View the virtual try-on image plus a **size recommendation** with fit confidence score (e.g. "Size M — 92% confident").

> **Info:** The Fit-On module requires more credits than standard generation due to the additional sizing analysis.

8. History & Managing Generations

Access via the sidebar or navigate to `/history`.

Features

- **Paginated list** of all past generations (12 per page)
- **Filter** by module (Adult, Children, Accessories, Fit-On) and status
- Each entry shows: thumbnail, status badge, date, configuration summary, cost, and duration

Actions

Action	Description
View	Open the full results page for a generation
Download ZIP	Download all images from a generation as a ZIP file
Delete	Remove a generation and its output images (source garment images are kept)

Image Retention

Type	Retention Period
Generated output images	7 days (max 20 per user)
Uploaded source images	30 days

> **Note:** An automated cleanup runs hourly. Download images you want to keep before they expire.

9. Profile & Account

Access via the avatar icon in the sidebar or navigate to `/profile`.

Editable Fields

- **Display Name**
- **Language Preference:** English, Sinhala, Hindi, Tamil
- **Phone** (optional)

Account Information (Read-Only)

- Email (from Google account)
- Role (Admin or Standard User)
- Current subscription plan and billing date

10. Credits, Plans & Billing

Plans

Feature	Free	Basic (Rs. 990/mo)	Pro (Rs. 2,490/mo)
Monthly Credits	Daily allowance	150	500
Daily Limit	3/day	30/day	100/day
Watermark	Yes	No	No
Fit-On Module	Disabled	3/day	Unlimited
Priority Queue	No	No	Yes

How Credits Work

- Credits are checked **before** a generation starts
- If a generation **fails**, credits are **not deducted**
- The review page shows the estimated credit cost before you confirm

Payment

Payments are processed via **PayHere** (LKR). After subscribing, you are redirected back to DrapeStudio with a confirmation page.

11. Configuration Options Reference

Garment Types

Value	Label
casual	Casual Wear
formal	Formal / Office
saree	Saree
shalwar	Shalwar Kameez
batik	Batik
sarong	Sarong

Environments

Value	Label	Best For
studio_white	White Studio	Clean product shots, e-commerce
urban_street	Urban Street	Casual and streetwear

beach	Beach	Swimwear, sarongs, casual
garden	Garden	Batik, flowing garments
indoor_office	Office	Formal and business wear
coffee_shop	Coffee Shop	Casual lifestyle
traditional_room	Traditional Room	Sarees, shalwar kameez

Camera Angles (Auto-Applied)

Variation	Adult	Children
Image 1	Front view — facing camera	Front view — natural expression
Image 2	Three-quarter view — 45° turn	Gentle side view — 45°
Image 3	Back view — looking over shoulder	Back view — natural head turn

12. Tester Checklist

Authentication

- ☐ Google OAuth login (first-time user → profile onboarding)
- ☐ Google OAuth login (returning user → goes to home)
- ☐ Logout clears session and redirects to login
- ☐ Unauthenticated access to /upload redirects to /login

Adult Module — Full Flow

- ☐ Select garment type (e.g. Casual)
- ☐ Select gender (Feminine)
- ☐ Upload 1 garment photo → preview appears
- ☐ Upload 5 garment photos (max) → 6th is rejected
- ☐ Upload non-image file → error toast
- ☐ Remove a photo from preview grid
- ☐ Load image from "Previous Uploads" history
- ☐ Configure: change age, ethnicity, body type, hair
- ☐ Configure: select environment, pose, framing
- ☐ Configure: Quick Preview card shows correct summary
- ☐ Configure: garment thumbnail shows (not a broken icon)
- ☐ Review: all settings displayed correctly
- ☐ Review: credit cost shown
- ☐ Generate: status transitions (queued → running → succeeded)
- ☐ Results: 3 images displayed, gallery navigation works
- ☐ Results: download individual image
- ☐ Results: download all as ZIP
- ☐ Results: "Try Again" regenerates with same config

Children's Module

- ☐ Select each age group (Baby, Toddler, Kid, Teen)
- ☐ Configure child-specific options (expression, pose)
- ☐ Generate → 3 images with appropriate child model

- ☐ Invalid age/pose combination is rejected by safety validator

Accessories Module

- ☐ Select accessory category (e.g. Necklaces)
- ☐ Select display mode (On-Model, Flat-Lay, Lifestyle)
- ☐ Generate → 2 images with 1:1 aspect ratio
- ☐ Flat-lay images show correct surface (marble, wood, etc.)

Virtual Fit-On

- ☐ Upload garment + enter garment measurements
- ☐ Upload customer photo + enter customer measurements
- ☐ Results show virtual try-on image
- ☐ Size recommendation with confidence score displayed

History & Management

- ☐ History page lists past generations
- ☐ Filter by module and status works
- ☐ Pagination works
- ☐ Delete a generation → removed from list
- ☐ Download ZIP from history

Profile & Billing

- ☐ Profile page shows correct user info
- ☐ Edit display name → saves
- ☐ Change language → UI updates
- ☐ Free tier: 4th generation in a day is blocked
- ☐ Credit balance displays correctly on review page

Error Handling

- ☐ Generation fails → error message shown, credits NOT deducted
- ☐ Network disconnect during polling → recovers on reconnect
- ☐ Upload oversized file (>20 MB) → rejected
- ☐ Upload undersized image (<400px) → warning shown

Mobile

- ☐ Responsive layout on phone-sized screen
- ☐ Camera capture works in upload step
- ☐ Touch swipe works in results gallery
- ☐ Buttons are tap-friendly (no tiny targets)

13. Troubleshooting

Problem	Solution
Login button does nothing	Check that Google OAuth is configured and the redirect URI matches.
Broken image icon on Configure page	This was a known bug (fixed). Hard-refresh the page (Ctrl+Shift+R).
"GOOGLE_API_KEY is not configured"	The server's .env file is missing the Google API key. Contact the admin.
Generation stuck on "Queued"	The worker container may be down. Check with admin.
Generation fails immediately	Check the error message. Common causes: invalid API key, rate limit, or model not available.
Images look wrong or low quality	Try different environment/pose combinations. Use higher quality source photos (well-lit, plain background).
ZIP download is empty	Output images may have expired (7-day retention). Generate again.
Language not changing	Clear browser cookies and log in again, then set language from Profile.
"Daily limit exceeded"	Free tier allows 3 generations/day. Upgrade to Basic or Pro for more.
